

CONNECT INPUT WITH MULTIPLE OUTPUT

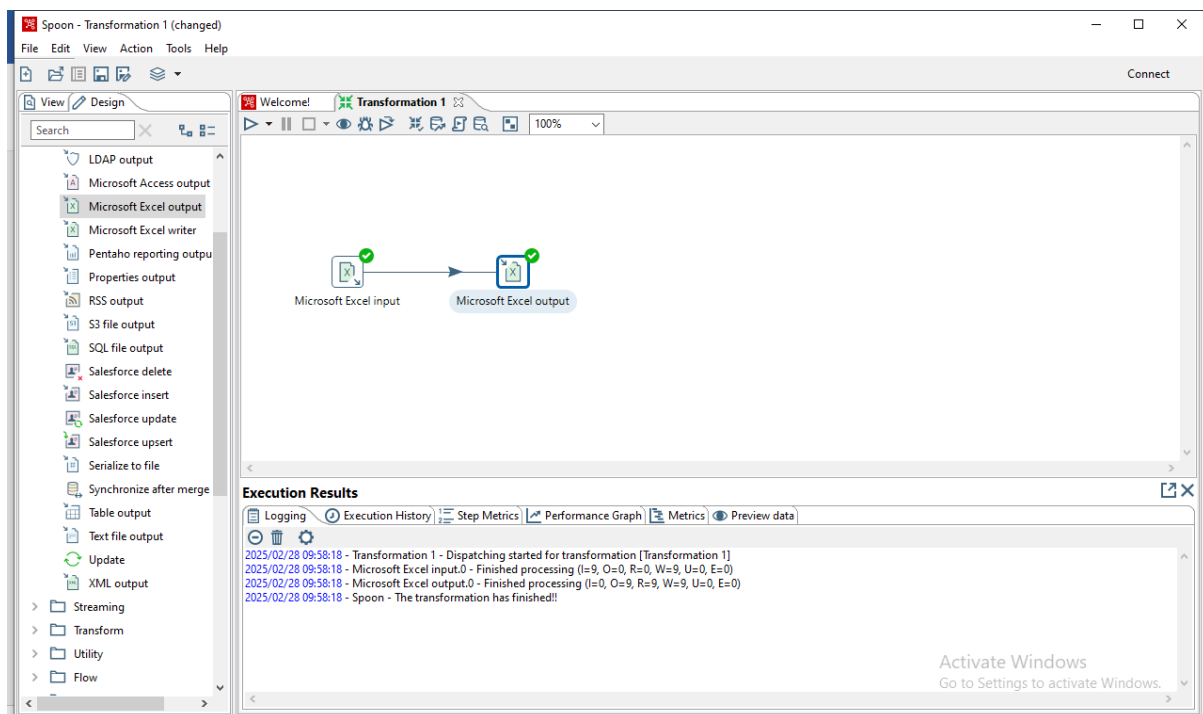

Aim:

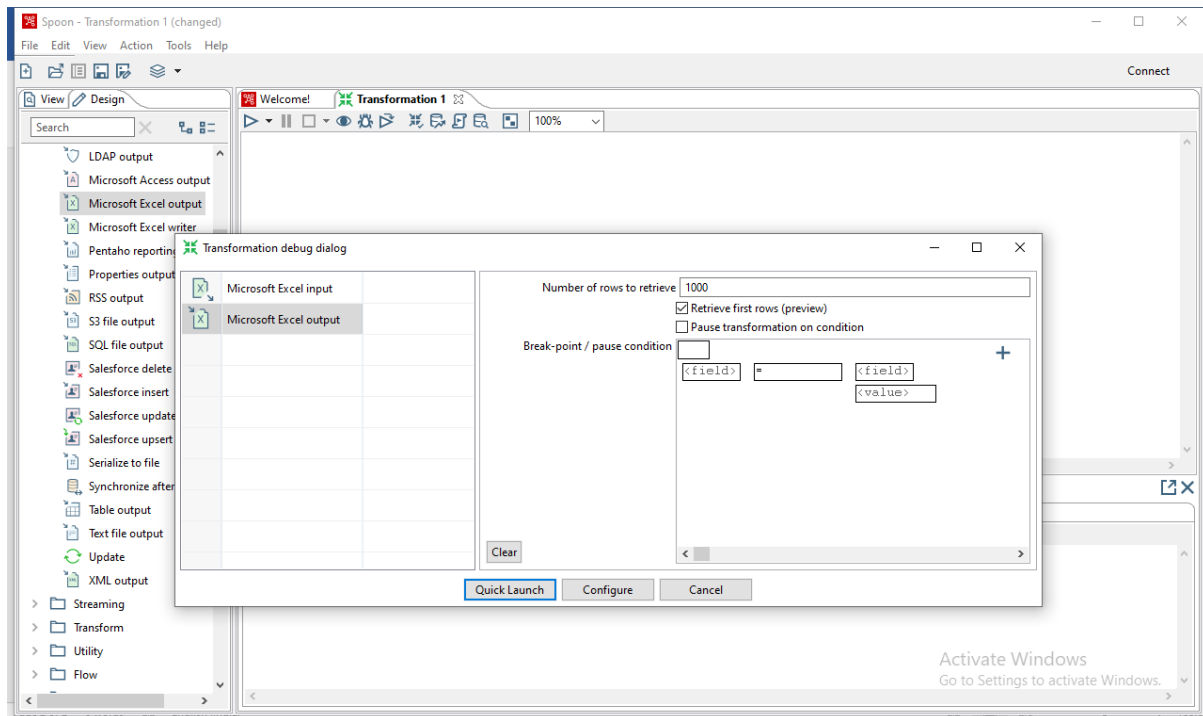

To Connect excel input with multiple output and retrieve the output.

Algorithm:

1. Start the process.
2. Create a Sales database using Excel.
3. Save the file in CSV format.
4. Open Pentaho Spoon tool for data integration.
5. Choose text input and text output for data retrieval.
6. Save the file.
7. Stop the process.

OUTPUT:

The screenshot shows the 'Examine preview data' window. It displays a table with 9 rows of data, representing student marks. The table has columns for 'regno', 'name', and 'total marks'. The data is as follows:

#	regno	name	total marks
1	101.0	Abitha	452.0
2	102.0	Babitha	439.0
3	103.0	Charu	468.0
4	104.0	Devika	350.0
5	105.0	Fathima	462.0
6	106.0	Guna	392.0
7	107.0	Harish	492.0
8	108.0	Pavi	467.0
9	109.0	savi	465.0
